Assignments - Information Security 2017

Nguyen Minh Huong, ICT Lab, USTH

October 4, 2017

Exercise 1

Based on the provided description of the A5/1 cipher, write a program in Matlab or using C++ to implement the A5/1 Key generation algorithm. List n the keystream bits, suppose that the values of registers are provided X_0, Y_0, Z_0

Test the program with following values:
$X = (x_0, x_1, ..., x_{18}) = (1010101010101010101)$
$Y = (y_0, y_1, ..., y_{21}) = (1100110011001100110011)$
$Z = (z_0, z_1, ..., z_{22}) = (11100001111000011110000)$
$n = 10$

Exercise 2

Based on the provided description of the square- and-multiply algorithm, write a program to calculate exponentiations $x^e \ mod \ m$

Exercise 3

Based on the provided description of RSA cryptosystem, write a program in Matlab or using C++ to implement RSA encryption and decryption process. System parameters p, q, e or d are given. Define keypair, ciphertext C if plaintext M is given, and reversely.

Test the program with following parameters:
1. $p = 5, q = 11, e = 3, M = 9$
2. $p = 3, q = 11, d = 7, M = 5$

Note

Documents are available in Moodle.
